NO. OF ENCLS 1 (2 pages).

SUPPLEMENT TO  
REPORT NO

50X1-HUM

50X1-HUM

THIS IS UNEVALUATED INFORMATION 50X1-HUM

1. In order to enter the Lipetsk Senior Officers' Flight Tactical School, it is necessary for a unit to have a distribution sheet (Rasnoryadka) giving the number of candidates in the various duty designations that may be sent to the given school. This distribution sheet arrives in a unit in the following manner: the VUZOV (Military Educational Institution) Directorate of the VVS informs the Officer Personnel Directorate of the VVS of the number of vacancies at Lipetsk every April or May; the latter then distributes these vacant slots among the Air Armies and VVS Military Districts in accordance with their actual officer strength. These distribution sheets indicate how many officers in the various specialties the Air Army may select and send to the Lipetsk School, what prerequisites are required of the candidates, and the duty designations in which they had to serve prior to being sent to the school.
2. Upon receiving this information, Air Army Headquarters distributes the vacancies among its corps (and separate units which are not a part of any corps, but are directly subordinate to Air Army Headquarters). After the Air Army Officer Personnel Section has distributed the vacancies and has received the Air Army Commander's concurrence, it sends copies of the VVS Officer Personnel Section's distribution sheet to the various units (Corps and separate units) along with the quota of candidates that can be selected from each unit. Upon receiving its distribution sheet, the Officer Personnel Section of the Corps goes through the same procedure as the Air Army. Upon receiving the corps distribution sheet, the Chief of the Divisional Officer Personnel Section reports its arrival to the divisional commander and simultaneously makes his recommendations as to who should be selected. If the divisional commander agrees, the Chief of the Divisional Officer

		DISTRIBUTION									

SECRET/SECURITY INFORMATION

50X1-HUM

- 2 -

Personnel Section contacts the selected candidate (within the regiment) by telephone or telegram and finds out if the individual desires to attend Lipetsk. After the candidates have been selected, the Chief informs the Corps Officer Personnel Section of the selections, and this procedure continues up to Moscow. Approximately one and a half or two months prior to their departure for Lipetsk, the candidates are summoned to appear before the Air Army Officer Personnel Section where they are again asked if they desire to attend Lipetsk. After affirmative replies are received, they are issued travel orders (Komandirovchniye Predpisaniya) enabling them to travel to the school. This is done because the unit's command must give the departing officer a consecutive 45-day leave including travel time, and must straighten out its accounts with him (financial, supply, etc). It also must keep him on the T/O until he is actually registered as an auditor at the school.

3. If the officer is accepted by the school, the school's Officer Personnel Section reports this to the Air Army's Officer Personnel Section from which the officer arrived; if, on the other hand, he is rejected, he is sent back to his Air Army and is left to their disposal. Upon arriving back at the Air Army, the rejected officer is again assigned to the position he held prior to his departure for the school.
4. Upon arrival at the school all of the auditors take entrance examinations and are checked by the Medical and Mandatory Commissions. After this, all of the auditors are divided into groups on the basis of their general educational background and their military training.
5. The total time expended on bringing the auditors together, giving them the entrance examinations, and having them checked by the Medical and Mandatory Commissions is never more than thirty days. After this, all of the auditors commence studying the program of their particular course.
6. There are only two basic courses at the Lipetsk Senior Officers' Flight Tactical School: one is the staff course and the other is the command course. The number of hours spent on the various subjects differs between these two courses.
7. The command course includes the following subjects although the number of hours spent on these subjects will vary among the different groups: The program of the Divisional Deputy Commanders', Regimental Commanders', and Deputy Regimental Commanders' Groups:

(a) Political Training	80
(b) Tactical Training	600
(c) Aerodynamics	200
(d) Navigators' Training	150
(e) Aerial-Gunnery Training	100
(f) Technical Training	50
(g) Meteorological Training	70
(h) Bombing Training	90
(i) Communications Training	60
(j) Chemical Training	88
(k) Flight Training	200
(l) Aerial Photography Service Training	60
(m) Topography	30
(n) Military Administration	40
(o) Physical Training	80
(p) Drill Training	20
(q) Regulations and Field Manual	10
Total:	1938

Tactical Training is divided in the following manner:

- (a) VVS Tactics
- (b) General Tactics
- (c) Methods of Tactical Training
- (d) SUV (Coded Direction of Troops)
- (e) Study of foreign Air Forces and Ground Forces

There are no special instructors for drill training or for regulations and field manuals. These subjects are conducted by the Course Chiefs and their Deputies for Drill Matters.

The program for Divisional and Regimental Navigator's Groups:

(a) Political Training	80
(b) Tactical Training	500
(c) Navigators' Training	220
(d) Aerodynamics	150
(e) Aerial Gunnery Service Training	100
(f) Technical Training	70

(p)	Aerial Photography Service Training	60
(q)	Regulations and Field Manual	20
Total		1938

The "hours" given for each subject include the time spent in taking periodic examinations on topics of the subject and in taking annual examinations in all of the subjects. However, this schedule does not include the time spent on graduation examinations which cover only the main subjects of which there are five or six. The remaining subjects are covered by annual examinations. All of the above hours are based on a ten-month training period for the various groups. The programs given here have been in effect since the beginning of 1946; prior to that time, similar groups underwent a six-month training period. Thus, the number of hours in the programs almost doubled. However, during the six-month training period these groups did not receive any flight training; their studies consisted solely of classroom work. Since the 10-month training period has been in effect, these groups work out air exercises (aviatsionnye vcheniya) which include the joint action of various types of aviation both in the classroom and in the air. The time spent in working out such a maneuver is taken from the time allotted to tactical training, and the time spent in the air is counted as time expended in working out flight training exercises. All of the above does not pertain to the staff course, since the students in the staff course which was completed in January of 1946, studied for a period of seventeen months (from the time they arrived until they graduated). For this reason, the program itself is more extensive in respect to the number of hours devoted to each subject.

8. The Staff Course has been as long as the command course since 1946. In addition to the many groups enumerated above, there is a special group composed of students from the satellite countries. In 1945-1946, this group consisted of 16 students, the first and last Yugoslav pilots to attend. Since this time, the groups have been from other countries. The above information is based on what officers who completed Lipetsk in 1947-48-49. These groups underwent a special program.

The Staff Course Program:

(a)	Tactics	1150
(b)	Bombing Training	220
(c)	Navigators' Training	300
(d)	Communications Training	160
(e)	Aerodynamics	140
(f)	Technical Training	178
(g)	Aerial Photo-Reconnaissance	120
(h)	Political Training	80
(i)	Meteorological Training	200
(j)	Chemical Training	240
(k)	Aerial Gunnery Training	200
(l)	Drill Training	60

SECRET/SECURITY INFORMATION

50X1-HUM

SECRET/SECURITY INFORMATION

50X1-HUM

-- 4 --

(m) Physical Training	80
(n) Military Administration	60
(o) Topography	60
(p) Regulations and Manual	<u>40</u>
Total	3328 Hours

According to the state diploma (goszachet), the above hours do not include the time spent in preparing for each examination, but, only the time an auditor actually spends in a classroom taking an examination.

9. A detailed description of the program by subjects is as follows;

(a) General Tactics (of the Soviet Army). All groups at the Lipetsk School work out the following general tactics topics:

The organization of infantry, mechanized, artillery, tank, cavalry, engineering and communications troops from the smallest unit (a squad) to Army and Front levels inclusive; thus, these topics will cover the following organizations: squad, platoon, company (battery), battalion (artillery, battalion (division) or cavalry troop), regiment, brigade, division, corps, army, front (district).

The operations tactics of these units and joint-units, their strength, armament, and missions during different types of combat and various stages of operations; the joint-operation of different types of troops in combat; offensive and defensive combat; the rear and supply organ of these troops.

Movement of troops (marching) in the rear and at the front; combat and march security of troops; antiaircraft, antiochemical, and antitank defense of troops; camouflaging troops; organization of communications in the various types of troops. during various stages of operations; execution of combat and information documents in the various types of troops (at company level and above) during different stages of operations.

Abbreviated designation of different units and joint-units in documents.

Designation of troops and their combat operations on a map by the use of tactical marks; keeping of work maps and complete (otchetnykh) maps by authorized individuals in the different types of troops, and, Signal, Communications and Joint-Action tables.

(b) VVS Tactics (of the Soviet Army). All groups work out the following topics in VVS tactics:

The organization of the following subdivisions, units, and joint units: fighter, ground-attack, bomber, long-range, reconnaissance and transport aviation from crew to Air Army level; organization of Airborne troops of the Soviet Army; a general introduction to the organization of the Main Headquarters, VVS. The organization of Reconnaissance Aviation - a detailed study of Reconnaissance organs from a Reconnaissance Regiment to the VVS Reconnaissance Section. The Organization of joint-operations between the various types of aviation during offensive and defensive combat.

The organization of VVS Rear Organs, units, and joint-units (air Technical Battalions and divisions).

The operations tactics of various types of aviation during the different stages of combat and operations. The basic functions of the types of aviation during offensive and defensive combat. The missions and operations tactics of airborne troops; rebasing of various types of aviation to operational airfields and the distance of these airfields from the front line.

Organizing the rebasing of flight and ground echelons; preparing to rebase and rebasing including the execution of a combat mission on the way.

Camouflaging airfields and the aircraft located on them. Organizing a network of decoy (lozhnykh) airfields and constructing all conceivable structures and decoys on them. Types of aircraft with which the various types of aviation are equipped and their tactical-technical specifications. Personnel strength of the different units and joint-units of the various types of aviation including the total number of officers and sergeants without a breakdown by duty designation.

(c) Staff training and tactical training methods. In staff training, the following topics are worked out:

SECRET/SECURITY INFORMATION

SECRET/SECURITY INFORMATION

50X1-HUM

- 5 -

Planning of combat and operational-tactical training in the squadron, regiment, division, and corps. In discussing the problem of planning combat training, the students are shown proper methods of computing time when compiling combat training plans and how to properly arrange these plans by going from simple to difficult combat training elements in a consecutive order. Which documents, how and by whom, are to be compiled when planning combat training; methods of compiling lectures, limited class room exercises (letuchek), group exercises, war games, and materials for field exercises and maneuvers; means of collecting data (literatura) necessary for the compilation of lectures, limited class room exercises, group exercises, war games, etc; instructors' methods of preparing for lessons and the conducting of lessons (this includes the working-out of lecture notes (konspekty) and their presentation to the auditors); the working-out of combat and informational documents by the various headquarters during offensive and defensive operations, as well as during joint-operations of different types of aviation, and aviation and ground forces. This includes all of the documents compiled by the various headquarters, regimental, divisional, corps, and air army, when the combat mission is received, when the combat flight is being organized, and, when the results of the combat flights are being formulated. The working-out of reconnaissance documents by the headquarters of the various units and joint-units: reconnaissance-instructions, compilation of the reconnaissance plan, the reconnaissance briefing, compilation of the reconnaissance report and summary (or an overall reconnaissance report for the day). The compilation of documents by the headquarters of an airborne division (VDD) and airborne corps (VDK).

(d) Foreign forces

50X1-HUM

The following topics pertaining to foreign troops were studied: the organization of ground, air, and naval forces beginning from the Minister of Defense and ending with the smallest subdivision; the armament of these units and joint-units as well as the tactical-technical specifications of their armament; total personnel strength with a breakdown as to number of officers, and number of sergeants and privates together; the latest changes in the organization of foreign troops and when they occurred; the operations tactics of these troops during offensive and defensive operations. All of the above was based on the experiences of World War II. Armed Forces' regulations which were obtained by Soviet Intelligence, positive and negative aspects of foreign troop operations and the organization of joint-action between the different types of troops.

50X1-HUM

(e) AUV (Coded Direction of Troops)

The AUV instructed the students in the proper method of working out prearranged message tables (peregovornye tablitsi) and signal tables, and how to code messages on the various types of communications equipment; rules applicable to the text of a coded telegram; who has the authority to sign and send coded messages; general principles of the Cryptographic Service; compilation of radio-signal-tables for the direction of aircraft in the air; rules for compiling various types of telegrams; rules for holding telephone conversations; degree of classification to be used on various documents and rules for handling them; the order to be followed in sending secret and top-secret documents; who has the right to classify documents and to what degree; regulations pertaining to the maintenance of secret files in the various headquarters.

(f) Bombing Training. In bombing training the following topics were worked out:

The ballistics of bombing; a study of bomb construction, its weight, characteristics, the force of its charge, and the targets on which it is used; the type of detonators used with given bombs; types of bombs and their maximum weights; types of bomb-racks (both external and internal) and their installation; where the bomb-bays (bomboluka) are located and the type of bombs they can hold; type and quantity of explosive used in charging various types of bombs; where the bomb-racks are located on an aircraft and their principles of operation during suspension and release of bombs; the construction and principles of operation of different types of bomb-sights; the installation of other types of equipment used in bombing; what data must be computed by the navigator ahead of time and set on the bomb-sight after he has set his own data on it; type of instrument and method with which it is possible to adjust for single or series bombing and for different quantities of bombs and time intervals between series; types of detonators, their construction, and principles of operation; type and quantity of explosive used in charging detonators; type of instruments which enable the bomb to be set to not explode or to explode; under what emergency conditions bombs can be released. In studying all of the above topics, books on bombing and the RB-43 (Bombing Directions of 1943) are used.

SECRET/SECURITY INFORMATION

SECRET/SECURITY INFORMATION

50X1-HUM

- 6 -

- (g) Navigators' Training. The following topics pertaining to navigators' training were studied:

The construction of all navigation equipment used on different types of aircraft; construction of navigation instruments and their principles of operation; the scales of maps in the VVS and which of them are used for flight purposes in the various types of aviation; the scales of maps generally used by air unit headquarters; how to map scales (miles and inches) into kilometers; selection, pasting together, and folding of maps; plotting a course on a map; all principles of navigational computations; who, and on the basis of what documents, is permitted to navigate aircraft; visual orientation; instrument navigation; utilization of radio-navigation equipment, etc.

- (h) Communications Training. The following communications topics were studied:

Organization of the Communications Service in units and joint-units of the different types of aviation; communications equipment existing in the various units and joint-units; study of radio apparatus and the purposes for which they are to be utilized; organization and equipment of wire communications; how communications between different units participating in joint-operations are organized; how wave lengths and call signs in the radio net are assigned; rules governing radio air-to-ground and ground-to-air transmission; organization of communications during joint-operations of air and ground forces; rules governing the tuning of radio equipment and the discovery of defects in the equipment; construction of telephones, switchboards, telegraph equipment, and Morse Code sending apparatus; Morse Code training; execution of various types of operations and combat; the following documents may be included in this category; organizational charts of wire and radio communications; extracts from the wave-length and call sign tables; communications reports and summaries; a study of radar installations including: Their construction, principles of operation, and training of operators for work on the installation; differences between a radio direction (radiospravleniye), a radio net (radio set) and, a radio junction (radio vzsl); types of radio receivers and transmitters installed in different types of aircraft and their tactical-technical specifications, as well as the radio stations used on the ground (mounted on trucks).

- (i) Aerodynamics. Topics relating to the aerodynamic qualities of various type aircraft are studied. The aerodynamic qualities of the first-type aircraft are compared with those of contemporary aircraft. The fundamentals of aerodynamics, the aerodynamics of high speeds, etc, are also studied.
- (j) Technical Training. In technical training, the following topics were worked out:

The construction of aircraft motors of various types including all details; construction of various-type aircraft; means of extending the endurance of motors and aircraft of various types; operation principles of various aggregates; the oil system; the cooling system; the fuel system, etc; degrees of altitude obtainable by aircraft engines and how these are attained; aircraft safeguarding and care; who has the right to pilot aircraft and who has the right to do maintenance work on aircraft.

- (k) Aerial Photo Reconnaissance. The following aerial photo-reconnaissance topics were worked out:

The organization of the aerial photo-reconnaissance service of the VVS from the reconnaissance crew level to the Reconnaissance Directorate of the VVS; types of aircraft used for conducting day and night aerial reconnaissance; types of aerial cameras used in the VVS for photographing objectives during the day and night; construction of cameras and their principles of operation; computations necessary in photographing objectives of different sizes; vertical and oblique photography; size of air force films; development of films after a reconnaissance flight which included photograph; photo-interpretation and creation of photo-mosaics and photo-albums (T N sets of mosaics showing different stages of an operation); computations during the photography of vertical objectives; size and construction of photo-air-bombs.

- (l) Political Training. The political training topics covered a short history of the VKP (b) (All-Union Communist Party (of bolsheviks)) which is planned in accordance with the program of the main Political Directorate of the Armed Forces of the USSR. During the whole duration of the political training course, "the short history of the VKP (b) course" was thoroughly covered; primary-source materials dealing with different chapters were used; special emphasis was placed on the fourth chapter "Dialectical Materialism."

- (m) Meteorological Training. The following topics were covered in meteorological training:

SECRET/SECURITY INFORMATION

C. 8. 1. 1. 1. 1.

SECRET/SECURITY INFORMATION

50X1-HUM

- 7 -

The development of cold and warm fronts, including indications of their proximity, the speed at which these air masses move, and their predominant weather; development of occlusions (okkluzii) of the cold and warm front types including indications of their proximity, the speed at which these air masses move, and their size, development of low-pressure areas in cyclones (lozhbin) and their prevalent weather; what is included in the term "barometric tendencies"; causes of thunderstorms; types of winds and their development; local indications in determining weather; influence of air masses on air force flights; what types of maps and scales are used in the meteorological service; study of the international meteorological code; coding and decoding weather telegrams; reading meteorological maps; the organization of the VVS Meteorological Service from an Air Technical Battalion to the Main Directorate of the Aero-Meteorological Service; study of various types of meteorological instruments at a meteorological station; development of overcast and its designation according to the international system; the role of Meteorology in contemporary flying and in the national economy.

(n) Chemical Training covered the following topics:

The organization of the Chemical Service of the Armed Forces of the Soviet Union and especially of the VVS; designation of chemical substances with which the Soviet Army and foreign armies are equipped; the composition of these chemical substances and the form in which they are applied; the color and odor of chemical substances; chemical equipment of the Soviet Army and foreign governments; such equipment includes: chemical bombs, shells, grenades, spray-tanks, ampules, etc; storage of chemical substances, handling them, and charging various types of combat shells and spray-tanks with them; persistent and non-persistent poisonous chemical agents and their application; computation for the effective spraying of various enemy objectives with persistent poisonous agents; use of air chemical bombs on various enemy objectives; types of detonators used in air chemical bombs; computations for laying a smoke-screen by means of smoke-pots and bombs as well as smoke-creating instruments suspended under aircraft; organization of antichemical defense in the Armed Forces of the Soviet Union; antichemical defensive agents with which foreign armies are equipped and with which the Soviet Army is equipped - these include agents used on personnel, animals, aircraft, and armaments; chemical agents used to decontaminate various poisonous substances, on personnel, animals, aircraft, food products, and drinking water; indications in determining areas contaminated by the enemy and methods of determining the particular poisonous substance used; indications determining an attack with a poisonous agent on personnel and first-aid measures for those poisoned; activity of personnel when a chemical alert is sounded; the organization of personnel and aircraft decontamination points on airfields.

(o) Aerial-Gunnery Training. In accordance with the program, the following topics dealing with aerial-gunnery training were covered:

Various types of air armaments with which the VVS is equipped and also ground armaments; types of air arms installed on various contemporary type aircraft and their tactical-technical specifications; construction of air cannons and machine guns; (in studying the above topic, construction of air cannons and machine guns, the auditors had to learn the exact designation of all parts of the given arms); where these armaments are installed on the aircraft; the joint-functioning of different parts of these arms during gunnery; speedy methods of discovering defects if the arms fail to function in the air and the elimination of these defects (in the air); care of armaments; types of oil used for oiling armaments during the winter and summer periods; the classification of ammunition used in different types of air armaments; the structure of ammunition and the explosives used in ammunition; what air armaments are used on turrets; types of aircraft on which turrets are used, their construction, and the part of the aircraft where they are installed; types of gun sights used on air arms installed on the different type aircraft; the construction of these gun sights and their principles of operation; actual firing with various types of air arms on a gunnery range at moving and stationary targets; care and storage of air arms; rules covering feeding ammunition belts; ballistic qualities of air armaments; repair of air armaments.

(p) Drill Training. In drill training, topics which provided officer personnel with actual command practice were covered. In covering drill training topics, the auditors had to learn all commands necessary in forming, marching, etc, a subdivision. Other topics were: The correct way to plan and conduct drill training with the officer and sergeant personnel of a subdivision, (this subject included the study of such infantry weapons as, the rifle, submachine gun, and pistol). All of this training is provided in order to enable these officers, once they have graduated from the school and are serving in units and joint-units, to train their subordinates; for this purpose, they must themselves be well-trained in all of these subjects.

(q) "Physical training appears as an important element in training troops since it provides each serviceman with the endurance and agility that is required in a difficult combat situation. The better physically trained a serviceman is, the easier it is for him to endure all the hardships of a difficult military situation." This is the description of physical training to be found in military regulations of the Soviet Army and in the physical training and sports program of VVS personnel. The physical training program is divided into a number of sections which, in turn, are divided into a few separate programs for different groups of officers and sergeants of the VVS.

SECRET/SECURITY INFORMATION

SECRET/SECURITY INFORMATION

50X1-HUM

- 8 -

There are three sections in the physical training program: the 1st one for pilots and navigators, the second for technical personnel, and the third for all other personnel of the unit and joint-unit. The first section gives the programs for pilot personnel of the different types of aviation and for navigator personnel. The second section includes programs for officer technical personnel, mechanics of various specialities, and junior avia-specialists. The third section gives the programs for command personnel groups and staff officers groups. Thus, while studying at Lipetsk School, individuals in the staff course underwent the physical training program for staff officers, and individuals in the command course, the program for command personnel of units and joint-units. Both of these programs included the following elements:

- (a) Sports (games)
- (b) Working-out of exercises on (turnik) cross-bar?
- (c) Working-out of exercise on parallel bars;
- (d) Working-out of exercise on (loping) 360° swing?
- (e) Working-out of exercises on ladders and ropes;
- (f) Working-out of exercises on (kozly) horses?
- (g) Running, grenade-throwing, height and length jumps;
- (h) Swimming, skiing etc;
- (i) Working-out exercises on the Reinsk Wheel (for the Command Course);
- (j) Exercises with bar-weights;
- (k) Training on a centrifuge (only for pilot and navigator personnel of the Command Course);
- (l) Exercises on a low cross bar (perekladina)?;
- (m) Javelon and disk throwing;

It should be pointed out that the skiing program is not conducted in all parts of the country. In areas where there is no snowfall, a 20-kilometer march is substituted for skiing.

- (r) Military Administration. The following topics dealing with military administration were worked-out:

The Rear organization of the Soviet Army; in this topic, the auditors studied the organization of all supply organs of the armed forces, especially those of the VVS. The above mentioned organs are connected with the financial supply of personnel, the food supply of personnel, clothing and equipment supply, POL, armaments, and ammunition supply; the organization of railroad transportation during time of war; movement of troops by railroad during time of war; samples of documents dealing with various types of supply and how to fill them out; the organization of the Medical Service in the Armed Forces of the Soviet Army, from an infantry battalion to the Main Medical (s-unitarnoye) Directorate of the Armed Forces; the organization of hospitals in the front area; evacuation of wounded from the battlefield and their assignment to the rear for an extended and stationary cur.; assignment of patients after they have been cured; special distinctions in the supply organization of troops that are surrounded.

- (s) Topography. The following topics dealing with topographical training were presented: reading of topographical maps; how various objects and localities are designated on maps; a study of topographical maps; correct composition of locality maps; how to determine map scale if the place where the scale was given is torn-off and lost and there are no other maps available meaning that these must be used; means of determining the elevation of hills and the depth of ravines if this information is not given on the map.
- (t) Regulations and Manuals. Auditors were supposed to study regulations and manuals independently (without instruction) during the day in class, after which they were examined on the different chapters of various regulations and manuals that were studied. While the auditors are independently studying the regulations and manuals in class, the deputy chief of the course for drill matters must be present. If the auditors have any questions dealing with any regulations or manuals, he must be able to fully explain all that they do not understand. However, if a majority of the auditors do not understand some particular aspects, he will interrupt the independent study session and explain the aspects to the whole class.

10. The program [ ] does not show the time allotted for government and annual 50X1-HUM examinations. Annual examinations are given immediately upon the completion of the designated programs; thus, the annual examinations in various subjects are given at different times. These examinations commence when there is approximately one-fourth of the allotted time before graduation left. There is no special time allotted for preparing for annual examinations although such time is provided for the final examinations. In planning final examinations, an interval of two or three days between subjects is considered necessary. The time during this interval is utilized in preparing for examinations. During this period, the instructors are present in the classrooms where the auditors are studying to answer any questions that might arise on the part of the auditors. However, during this preparation period, auditors are not required to be present in class; they may study independently wherever they choose. At examination time, all of the auditors gather in class after which the commission which will listen to the examination arrives. The commission informs the auditors of the order in which the examination will be given and then ascertains that everyone is prepared, in good health, etc, after which the auditors go out into the corridor and wait until they are summoned

SECRET/SECURITY INFORMATION

50X1-HUM

- 9 -

to take the examination. Three or four auditors are simultaneously summoned. Upon entering the classroom, they report their arrival to take government examinations to the chairman of the commission. After this, the auditors select little tickets which give the questions that they must answer and inform the commission of the number on their ticket. They sit down at tables and prepare to answer their questions. Each auditor has ten minutes to prepare his answer. After the ten minutes are up, the auditor announces that he is ready to answer and begins to do so. After the answer he leaves not knowing the result (evaluation) of the examination. The "evaluations" are announced to the auditors at a meeting which is attended by all of them after all examinations have been given. Auditors receiving poor evaluations may submit reports to the chairman of the commission for government examinations and when granted permission may be reexamined in a given subject. Then, certificates of completion and orders stating the category in which they graduated are made out for the auditors. After this, the auditors wait for assignment orders and upon receiving them depart for their new service station.

11. My description of the topics pertaining to various subjects deals with all groups in the staff and command courses. However, all topics in the program which pertain to the specialty of a given group are covered in more detail than they are in groups which do not have this specialty. As an example, the staff training topics of the staff course are covered in more detail than these same topics in the command course. Such examples would include: navigators' training, aerial-gunnery training, and aerodynamics. The above topics are covered in the programs of both courses, the staff course graduating in 1946, and the command course graduating in 1946-47, in other words, the seventeen month period staff course and the one year command course. However, it must be pointed out that graduating classes of the staff course since 1946 have had a program which has been shortened in topics and number of hours by 1390 hours; thus, in 1947 and later the staff course has had a program consisting of 3328 hours. Until 1946, the command course program was shorter in number of hours since the training period was only six months long.

50X1-HUM

12. The training sections of the Lipetsk Senior Officers' Flight School are equipped in the following manner: each subject has one or two special classes which are equipped with necessary training aids. Such subjects as tactics, bombing training, navigators' training, aerial-gunnery service, and technical training have two equipped classrooms whereas, such subjects as chemical, communications, meteorological, military administration, and aerial photography service training have one class. There is a well-equipped gymnasium (sportivnyi zal) for physical training and a well equipped "tactics cabinet" (kabinet taktiki) for tactical training.

- (a) Equipment in the tactics class. This class is equipped with the following property in accordance with requirements in equipping tactics classes in training institutions: the class has a large box with sand depicting a broken terrain with defensive fortifications built on it. Included here are models of tanks, artillery and other types of armaments, all that is necessary for the analysis of tactical problems; signs with excerpts calling attention to the necessity of serious study in tactical training; charts showing the structure of defense lines; charts and signs showing different episodes from the Great Patriotic War (World War II); charts depicting various tactical symbols and their designation; bibliography of literature dealing with tactical training; models of various types of aircraft of the VVS of the Soviet Army, etc.
- (b) Equipment in the Navigation Training Class is as follows: models of all navigational instruments and equipment in sectional views; such instruments include: a compass (magnetic and gyro-magnetic), a clock, air speed indicators, altimeters, a radio-compass (with an antenna and other electrical instruments used in the operation of the radio-compass and other equipment); navigation equipment includes the following: navigation rules (NL-8), an aircraft computer (vetroschet), a scale line etc, charts showing various components used in computing flight data for operating in various weather conditions, etc.
- (c) Equipment in the Bombing Class. A bombing class has equipment which is necessary for training auditors. Such equipment includes: models of various caliber bombs (in sectional cuts and whole models); models of all types of detonators in sectional units which illustrate the structure and principles of operation of the detonators in sectional units which illustrate the structure and principles of operation of the detonators' mechanism; a stand showing the trajectory flight of a bomb and its ballistic characteristics. In addition, this class has four "cabins" equipped with all necessary navigational equipment; under the cabins is a mobile cloth depicting the ground just as it would look from the air. These cabins and cloth are used for sighting during bombing and making computations at this time. This class also has various types of sights used during bombing, bomb racks, and other instruments necessary for "series-bombing," establishing of time intervals, regulating the number of bombs in a "series," etc.
- (d) Equipment in the Aerial Gunnery Service Class is as follows: all types of air cannons and machine guns (these are combat arms which were once installed on aircraft but were later removed and assigned to training purposes). These arms are installed on racks (pyramidy) which are fastened to tables. This class also has

SECRET/SECURITY INFORMATION

SECRET/SECURITY INFORMATION

50X1-HUM

- 10 -

- training ammunition, wooden manikins, punches, and other equipment used in taking arms apart and putting them together; sights used on various types of aircraft and for various air arms; turrets from various types of aircraft; boards showing the arms in their stripped form (all the component parts of air cannons and other arms are mounted on these boards and the exact technical designation of each part is given); devices used in sighting and dry-firing the arms; various types of charts showing the trajectory flight of projectiles and bullets, methods of determining the distance and speed of targets, and methods of recognizing the silhouette (rakurs) of the target and other elements of aerial gunnery.
- (e) Equipment in the Technical Training Class. The technical training class has the following equipment which assists in demonstration-training in air technology: aircraft engines of various constructions (this includes motors of the following types: one water-cooled VK-105 motor, one air-cooled M-82 type, and one of the M-11 d type); boards with sectional views of various parts of motor components, as well as whole parts; a wind tunnel (aerodinamicheskaya trubka); charts showing the functioning of the oil system, the gasoline system; and, the cooling systems of various types of aircraft engines; charts showing the construction of various types of aircraft, separate mountings with aircraft control parts; and, a series of other charts showing all of the components of an aircraft.
- (f) Equipment in the Chemical Training Class includes the following property which is necessary for demonstration-training in chemical substances and means of antichemical defense: sectional views of various caliber air chemical bombs, test-tubes with samples of combat-poisonous substances with which the Soviet Army and foreign armies (the armies of the US and England) are equipped. These samples are kept in a special box under lock and key and are removed only when they are needed for training purposes; an aircraft spraying tank mounted on a stand (pyramid); a universal air chemical apparatus with supplementary attachments for smoke-developing, also mounted on a special stand; a board showing sectional views of a gas mask with a corrugated hose and an exhalation valve; a sectional cut of the canister showing the arrangement of the various layers of substances impenetrable to gases; a box with various antichemical equipment such as: anti-mustard gas raincoat, anti-mustard gas fatigue clothes, socks, stockings, gloves, etc; a box containing implements for determining the type of gas or OV (poisonous substance) with which an enemy has contaminated a locality, or which an enemy has used in a given area; sectional views of gas masks for horses and dogs; sectional views of individual first-aid packages (to be used on sufferers from poison substances mounted on a board).
- (g) Equipment in the Communications Class includes the following displays necessary for demonstration-training on the communications equipment used in the Soviet Army and especially in the VVS: all types of receivers and transmitters utilized in various types of aircraft. They are installed on special stands which are connected with antennas of the type installed on aircraft; telephone apparatuses; an ST-35 apparatus (a teletype); a "Bodo" (a teletype); all equipment necessary in supplying the radio telephone, and telegraph equipment with electricity (converters, batteries storage batteries, and generators with small motors, (divishki); charts showing the organization of troops' communications during various stages of combat action and operations (an offense, defense, etc); radio stations installed on trucks which are used in the VVS as command stations; tables with keys for training students in receiving and sending by ear; four crash helmets (SHLEMOKON) with throat microphones (LARINKOFON) for training auditors in radio exchanges; all of the above equipment is located in two communications classes (rooms).
- (h) Equipment in the Meteorological Training Class includes property which simplifies the training of auditors in this subject. Various types of thermometers, barometers, barographs, and other instruments necessary for making weather observations are located in this class. In addition to this, the following charts are located in the class: the international meteorological code, international meteorological marks which are used on weather observation maps, various types of overcasts, indications in determining cyclones, fronts, occlusions, anticyclones, and other forms of aerial masses.
- (i) Equipment in the Aerial Photo Service Class. The aerial photo service class is equipped with property necessary for the training of auditors. Three or four cameras of the type installed in reconnaissance aircraft for day or night photography are located in this class; a sectional view of a model photo-bomb used in the VVS; charts showing the assembly of photo-mosaics and photo-albums (a series of photo mosaics); charts showing various objects (troops, dummy and active airfields, railroad trains, tanks, artillery, etc) as they look from the air on photographs; interpreted and non-interpreted photographs; and models of various equipment found in a photo-laboratory and chemicals used in developing films as well as putting films through other processes.
- (j) Equipment in the Gymnasium and the Sports field. The gymnasium and sports field have almost identical equipment. This equipment includes the following property: two or three cross-bars (turniki); parallel bars, horses (konny), a low cross bar (perekladina), ladders, climbing ropes, grenades, 360° swings (laping), bar-weights, a

SECRET/SECURITY INFORMATION

SECRET/SECURITY INFORMATION

50X1-HUM

- 11 -

Reinskii Wheel, boxing gloves and punching bags, mats to be used with the parallel and cross bars, etc.

- (k) Equipment on the Gunnery Range. The school's gunnery range is equipped with various turrets and other sighting installations on which are mounted air cannons and machine guns. Furthermore, the gunnery range is equipped with mobile targets which make it possible to train the auditors in firing at moving targets (aircraft) and in making calculations as to the speed and distance of a moving target.

Ten persons using air arms and five to six persons using infantry arms can fire on this gun range simultaneously. This range was constructed in a manner which makes it possible to use it regardless of weather conditions since a half of it is enclosed and half of it is in the open. Therefore, during bad (rainy) weather, the auditors fire inside the range building and in good weather, they fire outdoors. The targets are moved with the aid of electric motors which receive their power from the school's electrical unit or from storage batteries. The guns installed on turrets or other mobile gunnery trainers are connected to the net or storage batteries and they work automatically in the same manner as on aircraft. The auditors always use combat (live) ammunition and shells when firing for training purposes. A sight is installed with each gunnery trainer which is the same type as the one on the aircraft where similar equipment is installed. This range is under the supervision of the aerial-gunnery training cycle and is the place where this cycle conducts its training.

13. There are no special classrooms set aside for military administration training; all instruction in this subject is usually given in the tactics classrooms or in other classrooms which happen to be unoccupied during the given day.
14. No special classrooms are provided for such subjects as drill training or regulations and manuals instruction. Drill training is always conducted on the sports field or another area specially set aside for drill training or other formations regardless of the weather.
15. Instruction in regulations and manuals is given in classes which are unoccupied at the given time, and in a few cases, on the sports field if it is necessary to demonstrate certain aspects (or separate elements) of the instruction.
16. Before he begins his training, each auditor at the Lipetsk School receives two corded, numbered notebooks which are fastened with tar (surguch) seals (to prevent pages from being removed); secret and top-secret notes from lectures in tactical training (basically) and other courses are kept in these notebooks. In tactical training, the organization of the Soviet Army and foreign armies and other especially important data dealing with the intelligence service is entered into this notebook. Before classes start, each auditor signs for and receives his notebook; after using it during the day, he turns it back into the secret section. After he graduates from this school, the auditor informs the secret library of the designation of the Air Army (or VVS Military District) to which he has been assigned. Approximately one month after his departure, the library sends the secret notebook to the officer Personnel Section of the Air Army (or VVS Military District) to which the auditor was assigned. Upon receiving the notebooks, the Air Army Officer Personnel Section sends them to the unit to which this officer was assigned. When the notebooks are received by the Secret Section of the regimental or joint-unit headquarters to which the officer was assigned, they are registered in the Journal of received secret documents and inform the officer in question. The officer may then use his notebooks in the same manner as other secret documents. When the officer is transferred to another unit, his notebooks are sent there by the secret section. In those cases where the officer is sent to the Officer Personnel Directorate at VVS Headquarters in Moscow and does not know what Air Army or VVS Military District to which he will be assigned, he waits until he has been assigned in Moscow and has arrived at his new place of duty and then, through the secret section, he sends an official request to have his notebooks sent to the indicated address. Upon receiving such a request the secret section sends the officer's notebooks to the indicated address where the same procedure (as above) is gone through. These notebooks may be destroyed by a commission after certain data (such as the designation of the destroyed document, a short summary of the document, etc) has been entered into the destroyed secret documents set, by request of the officer. The notebooks may also be destroyed in those cases where the officer has been transferred to another unit through Moscow and has not sent a request to his former unit to have the notebooks sent to his new unit within one year.
17. [redacted] a chart of the Lipetsk Senior Officers' Flight Tactical School of the VVS Enclosure (a). In describing the enclosed chart, [redacted] in the case of some of the boxes giving courses subordinate to the Chief of the Educational - Flight Section, only Senior Instructors and Instructors have been shown since these courses do not have a cycle organization. In such cases, the Sr Instructor is the Chief of the other instructor and checks on his background in the course to be conducted by the instructor. He also authenticates the instructor's lecture outlines (konspekti) and presents his own lecture outlines to the Chief of the Educational - Flight Section for authentication. The following is a brief description and explanation of the numbered blocks shown on the Enclosure:

SECRET/SECURITY INFORMATION

50X1-HUM

50X1-HUM

SECRET/SECURITY INFORMATION

50X1-HUM

- 12 -

- (1) The Chief of the School, according to the T/O, should be a Lt General or Col General of Aviation. Actually, Maj General of Aviation, Hero of the Soviet Union Varlikin held this post in 1945-46, and in 1950, Lt General of Aviation Seleznev. The School Chief is directly subordinate to the Chief of VUZOV (Military Educational Institutions) of the VVS and operationally subordinate to the Commander of the VVS Military District in which the school is located.
- (2) The School's Chief of Staff, by T/O, is a Major General or Lt General of Aviation. Nevertheless, a Col Matveyev was assigned to this duty in 1945-1946; he was First Deputy to the Chief of the School. It was his responsibility to control every subdivision of the school in matters pertaining to combat training, maintaining military discipline and a series of other problems.
- (3) The School's Deputy Chief for Political Matters (simultaneously the Chief of the School's Political Section), is, by T/O, a Colonel or Major General of Aviation. Col Novikov held this post from 1946-1950; he was responsible for the political training of all of the school's personnel as well as the status of their military discipline and combat preparedness. According to the school program, political training is wholly in the hands of the school's political section. All political training instructors are included in the school's political section. The Chief of the Political Section commands the following: (14) the officers' club, (13) secretary of the Party Organization, (12) secretary of the Komsomol Organization.

Numbers 12 and 13 are responsible for the supervision of all lower-level Party and Komsomol Organizations. These organizations are commanded by the following officers: a Major - Lt Colonel as Party Organization Secretary, and a Major - Captain as Komsomol Organization Secretary.

- (14) Chief of the Officers' Club is a Major or Lt Colonel; his deputy for group-cultural (kulturno-svoiv) work is a Captain or Senior Lieutenant; the Chief of the Library is a Senior Lieutenant or Lieutenant and the librarian (bibliotekar) is a female civilian. The Chief of the Club supervises all of the club's operations in servicing officer personnel and their families with various forms of entertainment and is responsible for the club's equipment and order during group measures. The Deputy Chief of the Club is responsible for organizing various social events (during the evenings), drama and music circles, as well as for providing the club with motion pictures. He compiles a schedule of club operations for each month and sees that it is carried out.
- (4) School Deputy Chief for the Rear is, by T/O, a Lt Colonel or Colonel; (Lt Colonel Derevyanko held this position in 1945-46). He supervises all of the school's supply organs and reports on the status of the supply service to the Chief of the School. The sections and subsections shown in boxes 39, 40, 43, 45, 47, and 49, are under his command (these boxes will be described below).
- (5) The MGB Counter-Intelligence Section consists of five officers and two civilians. The Chief of the Counter-Intelligence Section is a Colonel and his Deputy is a Lt Colonel; the other officers are Majors and below. Their function is to check on the loyalty of all personnel to the Soviet regime.
- (6) The Main Engineer of the School, according to T/O, is an Engineer Colonel or Major General of the Engineering Aviation Service. An Engineer Colonel was the school's Main Engineer during 1945-46. He is responsible for the condition of the school's Engineering Aviation Service which, in addition to the Senior Engineers of the Educational Air Regiments, is under his command. The Main Engineer of the school is simultaneously the Chief of the Engineering Section (Box 69). The Engineering Section (Box 69) includes the following individuals: the Deputy Main Engineer of the school - an Engineer Lt Colonel or Colonel, Armaments Engineer of the School - an Engineer Lt Colonel or Major, Special Equipment Engineer of the School - an Engineer Lt Colonel or Major.
- (7) Chief of the School's Medical Service, by T/O, is a Colonel of the Medical Service (although in 1946, a Lt Colonel held this post). He is responsible for the status of the school's Medical Service and has the following individuals under his command: the QATB's Senior Physicians, the Chief of the Dispensary, the Chief of the Receiving Section (ambulatory) and the Chief of the Pharmacy.
- (8) This school had two QATB's each of which included: an QATB Senior Physician, by T/O, a Major or Captain of the Medical Service, a Military Medical Assistant who was a Lt or Senior Lieutenant of the Medical Service, and a civilian nurse.
- (9) The school's dispensary contains 50 beds for hospitalized cases. (Major of the Medical Service Sokakin (an ear, nose, and throat specialist) was the Chief of the Dispensary in 1946). In addition to the Chief, the T/O of the Dispensary called for the following individuals: a Dispensary Senior Physician - Major or Lt Colonel of the Medical Service who specialized in therapeutics, three civilian nurses, a dining room supervisor (male or female); two cooks (male or female), and three cleaning-women.
- (10) The following duty designations enter into the T/O of a Receiving Section: The Chief of the Receiving Section - an internal ailments physician who was a Lt Colonel or Major of the Medical Service, a civilian dentist (in 1946, a female named Klinovskaya co-

SECRET/SECURITY INFORMATION

SECRET/SECURITY INFORMATION

- 13 -

cupied this post), a physician specializing in gynecology and venereology who may or may not be a civilian; a neuropathologist - a Major or Captain of the Medical Service, an ophthalmologist - a Captain of the Medical Service, two civilian nurses and one laboratory-worker. Major of the Medical Service Sobakin (the Chief of the Dispensary) received patients suffering ear, nose and throat ailments, in the Receiving Section. The physicians of the Receiving Section are on duty by turns for 24 hours a day.

- (11) The Chief of the Pharmacy, a Major or Captain of the Medical Service, prepares all types of medicines according to the prescriptions of the Receiving Sections's physicians and the Chief of the Dispensary.
- (16) The Chief of the Educational, Flight Section (V T O), is the School's Deputy Chief of Staff. According to the T/O, his grade is Colonel or Major General of Aviation. In 1946, this post was occupied by a Colonel Mayer (a German by nationality). According to officers who graduated from this school in 1949, during a six-month period Colonel Mayer temporarily was the School's Chief of Staff but his permanent position was that of the Chief of the Educational-Flight Section. He was responsible for organizing the whole educational program and for seeing that it was carried out as well as the educational flight training of the school's auditors and permanent personnel. He was also responsible for the training of the school's instructors. The Chiefs of all Facilities (Tsikli), the Senior Instructor of various subjects, the Secret Library, and the Tactics Cabinet were under his supervision. Colonel Mayer's duty slot is comparable to that of an Air Army Operations Officer in a combat joint-unit.
- (17) The Deputy Chief of the School's Educational-Flight Section is, by T/O, a Colonel or Lt Colonel. This post was held by Lt Colonel Pylayev in 1946. He was responsible for maintaining control over the training of instructor personnel and for organizing the educational program. Two civilian typists are directly subordinate to him.
- (15) The Secret Library is directly under the command of the Educational-Flight Section Chief. The Chief of this Library is a Lieutenant or Senior Lieutenant; one female civilian acts as the library-helper. 50X1-HUM  
50X1-HUM  
 This library contains all the secret materials used by instructors and auditors in preparing their lessons and the auditors' notebooks in which notes are taken during lectures containing secret and top-secret information.
- (23) The Faculty (or cycle) of Tactical Training is the largest in number of personnel and in importance. The Chief of the Tactics Cycle is a Colonel according to the T/O, but, in 1946, a Lt Colonel Russiyanov temporarily held this post although he was actually the senior instructor of general tactics. The following individuals enter into the T/O of this Cycle: three senior instructors of general tactics, three senior instructors in VVS tactics and three in general tactics (who should at least be Major's or Lt Colonels even though Captains who have completed a military academy sometimes hold this position), and an instructor of topography, a Captain or Major.
- (24) The following individuals enter into the T/O of the Bombing Cycle: the Chief of the Cycle - a Lt Colonel (this position was held by Lt Colonel Ryabov in 1946), two senior instructors - Majors, and one instructor - a Captain or Major.
- (25) The following duty designations enter into the T/O of a Navigation Cycle: the Chief of the Cycle - a Lt Colonel or Colonel, two senior instructors - Majors or Lt Colonels, and two instructors - Majors or Captains. The position of Senior Instructor of Navigation Training was held by a Captain Dasher (later promoted to Major) in 1946.
- (26) The following duty designations enter into the T/O of the Aerial Gunnery Service Cycle: the Chief of the Cycle - a Colonel Envald (who holds a professorship) is the author of all the basic texts on the theory of aerial gunnery. However, according to some officers who were auditors in 1946, Colonel Envald has been transferred to a comparable position at the Military Red-Banner Command - Navigators' Academy of the VVS of the Soviet Army. In addition, this cycle includes two senior instructors - Majors or Lt Colonels, and two instructors - Captains or Majors. The gunner ranges, target area (Polygon), and training equipment is under the Aerial Gunnery Service Cycle Chief's supervision.
- (27) The Technical Training Cycle includes the following duty designations in its T/O: the Chief of the Cycle - an Engineer Colonel or Lt Colonel, one Senior Instructor - an Engineer Lt Colonel or Major, and one instructor - an Engineer Captain or Major.
- (33) This Section includes the following duty designations: a Senior Instructor of Physical training and sports - a Major or Lt Colonel, and one Instructor of Physical Training and sports - a Captain or Major. 50X1-HUM  
 In 1946, the instructor's position was filled by a former auditor in the staff course, a Senior Lieutenant Malinovskii (who is a Major at the present time).
- (34) The T/O for this Section includes the following duty designations: a Senior Instructor of Chemical Training - a Major or Lt Colonel (in 1946 this slot was filled by a Senior Lieutenant who had graduated from a civil chemical institute, the Senior Chemical Officers' School in the city of Tashkent); and, an instructor of Chemical training - a Captain or Major. This latter duty slot was not filled in 1946. 50X1-HUM

SECRET/SECURITY INFORMATION

SECRET/SECURITY INFORMATION

50X1-HUM

- 14 -

- (35) This Section includes; one Senior Instructor in Military Administration, a Captain or Major, who is directly subordinate to the Chief of the Educational-Flight Section. This position was filled by a Senior Lieutenant in 1946.
- (36) This Section includes: the Senior Instructor of Communications (line, radio and radar) a Major or Lt Colonel (however, in 1946, this position was filled by a Captain Smirnov) and, an Instructor of Communications - a Major [redacted]
- (37) This Section includes: a Senior Instructor of Meteorological Training, a Major, who was directly subordinate to the Chief of the Educational-Flight Section.
- (38) This Section includes: a Senior Instructor of Aero-Photo-Reconnaissance, a Major or Lt Colonel. In 1946, this position was filled by Senior Lieutenant Smirov. This individual is directly subordinate to the Chief of the Educational-Flight-Section.
- (64) The Tactics Cabinet is directly controlled by the Chief of the Tactics Cycle. Its T/O includes: the Chief of the Tactics Cabinet - a Major; and, the Chief's Assistant - a Captain. In 1946, this position was held by a former Senior Instructor of WVS Tactics (until 1946) a Major Mishchenko. [redacted]

50X1-HUM

50X1-HUM

The Tactics Cabinet is a large room equipped with posters, charts, models, and descriptions depicting various World War II episodes showing both positive and negative operating organization charts of foreign armies (basically American and English but including the armies of other Western Governments) which describe the equipment, combat and T/O strength etc, of the illustrated armies. All documents located in this cabinet are classified secret and top secret. The tactics cabinet was organized in November of 1945 by order of the WVS Commander-in-Chief.

- (18) The School's Personnel Section is directly subordinate to the School's Chief of Staff; according to the T/O, it includes the following duty designations: Chief of the Personnel Section - a Major, the Deputy Chief - Captain, two civilian typists, the Chief of the Secret (Documents) Section - a Captain or Senior Lieutenant of the Administrative Service, and a civilian secretary - typist.

The personnel section maintains records and reassigns sergeant and private personnel; it also formulates papers for their promotion to the next military rank and makes daily personnel reports on all personnel (including officers). Furthermore, the personnel section compiles a daily personnel memorandum (stroevaya zapiska) pertaining to the presence of personnel in the units, which shows what personnel are on duty in the unit, how many are absent and for what reason, and where those who are absent are and when they are expected to return to the unit.

The personnel section formulates travel documents (travel orders) and leave tickets for all personnel going on leave. It also conducts paper-work necessary to place newly arrived personnel (from other units or from leave) on supply and subsistence rations and to remove individuals, who are leaving their unit permanently or temporarily, from these lists. This section maintains a daily orders book which indicates the particular subdivisions from which the next days detail has been selected and the surnames of officer personnel and the post to which they are assigned for the detail. Furthermore, this section composes planned orders dealing with the unit's personnel activities, especially those of the sergeants and privates.

- (28) The School's 6th (Cipher) Section has a T/O of three: the Chief of the 6th Section, a Major, and two assistants, Captains.
- (29) The Chief of the Meteorological Service is an Engineer Major or Lt Colonel: his assistant - a Senior Technical Lieutenant, a meteorologist - a Sergeant, and, two radio-oper-ators - Sergeants or Privates. In 1946, an Engineer-Major [redacted] held the Meteorological Service Chief's position.
- (30) The School's Chief of Communications is a Lt Colonel or Colonel. Under this individual's command are: his assistant, a Major, the Chief of the Telegraph Section, and, the Chief of the Telephone Station. In 1946, the Chief of Communications was a Lt Colonel.
- (31) The Chief of the Telegraph Station is a Lieutenant who commands five Sergeant and six civilian telegraphists. The station is equipped with two "ST-35" and one "Bodo" teletype machines.
- (32) The Chief of the Telephone Station, a Senior Lieutenant or Lieutenant, is simultaneously the Commander of the Line Communications Platoon. He has 15 privates and two sergeants under his command who check all of the telephone lines within the school and are on duty at the telephone station for 24-hour periods.
- (19) The Officer Personnel Section of the School maintains records on the officer personnel, compiles officers' attestations, checks on officers' time-in-grade requirements and draws up attestations for promotion to the next consecutive rank. Furthermore, this section does the paper work involved in changing officers' duty designations or authenticating them. It prepares reward lists for officer personnel who are eligible to receive rewards

SECRET/SECURITY INFORMATION

SECRET/SECURITY INFORMATION

50X1-HUM

- 15 -

(in the form of decorations) for having served specified periods of time in the service. At specified times, in accordance with the table of periodic reports, this section reports to a higher-level officer personnel organ on the officer strength of the school in accordance with the school's officer T/O. According to the T/O, the Chief of the Officer Personnel Section should be a Major or Lt Colonel. In 1946, this position was filled by Major Kondratyev (or Kondroshov) who had under his command: the Senior Assistant Chief of the Officer Personnel Section - a Captain or Major, the Assistant Chief - a Senior Lieutenant or Lieutenant, and a civilian secretary-typist. This section is directly subordinate to the Chief of the School.

- (39) The Finance Section is directly subordinate to the Deputy Chief of the School for the Rear. The following duty designations enter into the T/O of this section; the Chief of the Finance Section - a Major of the Quartermaster Service, Chief Bookkeeper - a Captain of the Quartermaster Service, the Cashier - a Lieutenant of the Quartermaster Service; one civilian bookkeeper; and two civilian accountants. This section pays all of the school's personnel and provides for other needs of the school.
- (40) Under the Food Section are the Food Storeroom (41) and the dining-room (42). This section provides the school's personnel with food supplies, suitable storage of food supplies in the storerooms, and prepares the food served in the officers' and sergeants' dining-rooms. This section is directly subordinate to the School's Deputy Commander for the Rear. The following duty designations enter into its T/O: the Chief of the Food Section - a Major of the Quartermaster Service, his Assistant a Major or Captain of the Quartermaster Service, a civilian bookkeeper of the Food Section; two civilian accountants of the Food Section, the Supervisor of the Storeroom - a Sergeant, a civilian storekeeper, the Officers' Dining Room Supervisor - a civilian or a Jr Lieutenant or Lieutenant of the Quartermaster Service, and the Sergeants' and Privates' Dining Room Supervisor - a Sergeant. The following civilian personnel work in the Officers' Dining Room: four or five cooks (one of them is a Senior Cook), 10 waitresses (two of them senior), two dishwashers; one sticker, two kitchen workers, and one barmaid.
- (43) The Clothing and Equipment Supply Section provides the personnel with clothing (including flight clothing) and the Headquarters sections with office equipment. The Clothing and Equipment Storeroom (44) is under this section which is subordinate to the School's Deputy Commander for the Rear, according to its T/O, this section includes the following duty designations: the Chief of the Clothing and Equipment Section - a Major or Lt Colonel of the Quartermaster Service, Assistant Chief - a Captain of the Quartermaster Service, a civilian (usually female) Senior Accountant and Accountant of the Clothing and Equipment Section, the Chief of the Clothing and Equipment Storeroom - a Lieutenant or Senior Lieutenant of the Quartermaster Service, the Section's Storekeeper - a civilian or Private, four or five laundresses working in a laundry adjacent to the bath-house which is under the supervision of the Chief of the Bathhouse, a Sergeant, who is directly subordinate to the Chief of the Clothing and Equipment Storeroom, and two bath-house attendants (a civilian female and male).
- (45) The Motor Vehicle Company Commander is a Captain or Major, his Assistant for Technical Matters - a Senior Technical Lieutenant. The Motor Vehicle Company includes two platoons (46), one of which is equipped with special vehicles and the other with trucks and light cars. Each platoon is headed by a commander who is a Lieutenant or Senior Lieutenant and includes 30 sergeants and privates. The Commander of one of these platoons is also the Chief of the garage.
- (47) A depot containing fuel-lubricant materials is under the POL Chief's command. According to T/O, the POL Chief should be a Senior Technical Lieutenant. Under his command are a civilian accountant and the POL Depot Supervisor - a Sergeant (48).
- (49) The Chief of the Residence Maintenance Section (a Captain or Major) is directly subordinate to the school's Deputy Chief for the Rear. The following individuals are under his command: the KEO (Res Maint Section) bookkeeper, the KEO accountant, the supervisor of the furniture storeroom (50) - a civilian, the supervisor of the heating-fuel storeroom (51) - a civilian; three stokers, a plumber, a carpenter, an electrician, and porters for the various types of buildings (all civilians).
- (53) The Chief of the Staff Course, a Lt Colonel or Colonel (in 1946, a Lt Colonel Ostromovskii), is responsible for military discipline among staff-course auditors, their educational achievements, assignment of quarters, etc. The following individuals are under his command: his deputy for political matters (52) - a Captain or Major (in 1946, a Major Stepanov), the Assistant Chief of the course for drill - a Captain or Major (in 1946, a Senior Lieutenant Cheremushkin), the senior officer of the course (starshina kursa) is selected from among the auditors of the course on the basis of highest military rank and high degree of discipline, and the commanders of class sub-sections, selected from among the auditors in the same way as the course senior officer. There are six groups (consisting of 25-30 individuals or less in each group) in the staff course.

A secretary-typist and the supervisor of the storeroom (where luggage, etc, belonging to the courses' auditors is kept) are also subordinate to the Chief of the course. The Chief of the Course is directly subordinate to the School's Chief of Staff.

- (58) The Chief of the Command Course, a Lt Colonel or Colonel, is responsible (just as is the Chief of the Staff Course) for the military discipline, educational achievements, homework, assignment to quarters, rest, etc, of the auditors in his course. The following individuals are subordinate to him: the Deputy Chief of the Course for Political Matters a Major or Lt Colonel, the Assistant Chief of the Course for Drill - a Captain or Major, the Senior officer of the course - one of the auditors, the Commanders of Class Sub-Sections (59, 60, 61, 62) - selected from among the auditors on the basis of seniority in grade, past efficiency ratings, decorations, etc, the secretary-typist (female civilian), and the supervisor of the storeroom - (in which all of the personal property of auditors is kept) a female civilian. The Chief of the Command Course is directly subordinate to the School's Chief of Staff.

There are 12 groups (including the special group) which have a composition identical to those of the staff course. The special group (63) consists of 15-20 auditors from the Satellite States who are trained in Soviet flight training methods. All of these individuals are pilots whose duty designations are Squadron Commander and above. Actually they are not subordinate (like the other auditors) to the Chief of the Command Course although he assigns them quarters and sees to it that they are serviced there.

- (22) The Military Commandant of the School is directly subordinate to the Chief of the School; according to T/O, he should be a Major or Lt Colonel. The Commander of the Guard Company is subordinate to him and is his deputy. The Guard Company consists of about 60 sergeants and privates and three platoon commanders (officers). The school military commandant's responsibilities include the following: checking on daily details, on the external appearance of all military personnel within the school's residence area, and on the internal order within the garrison.
- (19a) The 1st Training Air Regiment. The Commander of this regiment is directly subordinate to the Chief of the School. In 1946 this position was held by a Colonel Kiselev. This regiment is composed of the following three squadrons: two fighter squadrons (one of which is equipped with YAK-type fighters and one with LA-type) and one ground-attack squadron (equipped with IL-10 aircraft). Each squadron consists of three flights, and each flight of two pairs. The following individuals are subordinate to the Regimental Commander: the Regimental Chief of Staff (66) who is a Lt Colonel or Colonel according to the T/O, the Regimental Deputy Commander (76), the Regimental Deputy Commander for Political Matters a Lieutenant Colonel or Colonel (77), the Regimental Senior Engineer (78) - a Major or Lt Colonel, the Regimental Navigator (79) - a Major, the Regimental Senior Physician (80) - a Major of the Medical Service, and the Squadron Commanders - Majors or Lt Colonels.

The following individuals are subordinate to the Regimental Chief of Staff: the Regimental Deputy Chief of Staff for the Operations Intelligence Section (67), the Regimental Chief of Communications (68), the Regimental Chief of the Chemical Service (69), the Chief of the Officer and E M Personnel Section (70), and the Regimental Chief of the Secret Section (71).

- (67) The Deputy Chief of Staff, a Major, has under his command one clerk - a sergeant.
- (70) The Chief of the Officer and E M Personnel Section, a Captain, has under his command one clerk (a Private or Sergeant) and one civilian typist.
- (71) The Chief of the Secret Section, a Lt or Senior Lieutenant of the Administrative Service, has one civilian typist under his command.
- (77) The Regimental Deputy Commander for Political Matters, a Lt Colonel or Colonel, had under his command the Party Organization Secretary (a Lt through Major inclusive) and the Komsomol Organization Secretary (a Jr Lt through Captain inclusive). Actually, these last two duty designations do not have any military rank limitations and the Regimental Deputy Commander for Political Matters does not have the authority to punish them in any way. Violations perpetrated by these individuals can only be punished by the Divisional Party Commission which does not notify other Party or Komsomol Members of the punishments decided upon.
- (78) The Regimental Senior Engineer has the following individuals under his command: the Regimental Armaments Engineer, the Regimental Special Equipments Engineer, the Regimental Radio Technician, and the Command Flight Technician.
- (72) This box shows the Commanders of the two fighter squadrons and one Ground-Attack Squadron. These squadrons include the following flight-personnel: the Air Squadron Commander, the Air Squadron Deputy Commander (who is simultaneously the Squadron Navigator) a Captain or Major, two Flight Commanders - Lt's through Captains, and two instructors in each flight - Lt's through Captains. Each Squadron is equipped with twelve aircraft. According to the T/O, these squadrons have the following technical personnel:

Air Squadron Sr Technician	1	(A Tech Lt through a Captain of the
Air Squadron Armaments Tech	1	Air Tech Ser)
Air Squadron Spec Equip Tech	1	
Flight Technicians	3	
Aircraft Mechanics	12

Armaments Mechanics	3
Radio Mechanics	1
Elec Equip Mech	1
Instrument Mechanics	1
Asst Aircraft Mechanics	12
Asst Armaments Mechanics	6
Asst Elec Equip Mechanics	2
Asst Instrument Mechanics	2
Asst Radio Mechanics	2

Basically, the above personnel are to be found in fighter squadrons. The technical personnel T/O of Ground-Attack Squadron will be practically the same but will be larger by two Asst Armaments Mechanics in each flight, two Radio Mechanics, two Electrical Equipment Mechanics, two Instrument Mechanic, one Asst Armaments Mechanic, one Asst Radio Mechanic, one Asst Elect Equipments Mechanic, and eight aerial gunners - radio operators. Thus, this regiment's total strength is 225 persons, 59 officers and 166 sergeants and privates.

- (20) The 2nd Training Air Regiment consists of three squadrons: one squadron of which is equipped with PE-2 Aircraft, the second with TU-2 Aircraft, and the third equipped with IL-4 and LI-2 Aircraft.

The headquarters organization of this regiment will be analogous to that of the other regiment. However, the composition of the squadrons will differ in that these squadrons consist of three flights each and each flight is equipped with three aircraft. The number of flight personnel in these squadrons will be approximately equal to six crews per squadron, and the number of technical personnel will be the same as that in a Bomber Air Squadron of Frontal Aviation. In this regiment, the officer personnel's T/O duty designations will be exactly the same as in the previous regiment.

50X1-HUM

- (21) This entry shows two Air Technical Battalions which service the Training Air Regiments. The composition of these battalions will be analogous to that of the 24th Air Army battalions.
